

HELIX

Ghost

Designed from the ground up as a carabiner for tactical and law enforcement end users.

The brief of the Ghost carabiner project was to significantly reduce the sound signature of the gate mechanism and all other contact surfaces whilst maintaining the size, gate opening and strength characteristics of a standard screwgate carabiner.

By creating a bespoke carabiner back we have been able to injection mould a noise reducing coating over all of the main surfaces whilst leaving an exposed aluminium rope basket to maintain good wear characteristics.

The unique screwgate configuration contains proprietary dampers to manage the distinctive 'click' of the gate mechanism being opened or snapped closed, a feature which is especially important in covert urban climbing operations.

Another benefit to the over moulded screwgate barrel is that it creates an anti vibrate function once fully closed adding another level of safety.

At 72grams and measuring 62 x 109mm the DMM Ghost carabiner is an excellent size for general purpose use.

Description	Product Code	Colour	Dimensions	Weight	MBS (Major Axis)	MBS (Minor Axis)	MBS (Gate Open)	Gate Opening (X)	Certification
Ghost Screwgate	A252	Matt Grey	62 x 109mm	72g	22kN	7kN	7kN	16mm	EN362:2004 A EN12275:2013 B

A significantly reduced sound signature from the gate mechanism and any contact with surfaces.

Noise reducing coating has been applied all over the main surfaces.

Exposed aluminium rope basket maintains good wear characteristics.

Unique screwgate contains proprietary dampers to manage the distinctive "click" of the gate mechanism.

Anti-vibrate function once fully closed is another safety feature.

Suitable for general purpose use during covert urban climbing operations.
